

**Northern Long-eared Bat Special Rule**  
**Michigan Known Hibernacula and Roost Tree Locations**

The U.S. Fish and Wildlife Service's East Lansing Field Office compiled location information for northern long-eared bat hibernacula and some roosts trees in Michigan. This information can be used to help project planners in determining the applicability of provisions of the northern long-eared bat's special rule under the Endangered Species Act (50 CFR 17.40(o)). Please use the tables below to see if we have information that may be applicable to your project.

If you are planning a project that may remove trees from forested habitat in the Michigan townships below, please contact our office with more specific information on the location of your project and we will confirm for you if there are any known hibernacula or roost trees within ¼ mile of your project.

If your project is within ¼ mile of a known hibernacula or roost, we will work with you to determine whether a permit pursuant to the Endangered Species Act may be applicable.

**Where are the known northern long-eared bat hibernacula in Michigan?**

<b>Known Northern Long-eared Bat Hibernacula in Michigan</b>			
<b>County</b>	<b>Township</b>	<b>Number of Hibernacula</b>	<b>Landownership</b>
Alpena	Alpena	1	public
Baraga	L'Anse	1	not specified

Wexford	Cherry Grove (4), Selma (13), South Branch (2)	19 (16 female)	private (2), public (17)

**What is required if there are known hibernacula or roosts near my proposed project?**

The Service does not require private landowners to conduct surveys for federally endangered species on their lands nor do we require our guidelines to be followed on lands where no records are known. If you know northern-long-eared bats are present on your property, you should contact the Service for help in managing your woodlot in compliance with ESA.
